

ABSTRACTMOBILE PHONE AND METHOD OF UPDATING RADIO CHANNEL SETTINGS

5 A mobile phone is provided with a broadband AM and/or FM radio signal receiver.
The mobile phone further has a radio channel memory for storing a plurality of radio
channel settings. The mobile telephone has further means for receiving messages,
such as SMS messages, and means for storing a radio channel setting contained in
a received message in the radio channel memory. A method of updating radio
10 channel settings of a mobile phone having a broadband AM and/or FM radio receiver
is provided. The mobile phone has means for receiving messages. The message
contains a radio channel setting. The radio channel setting may be stored in the
mobile phone.
